How to Measure a Euro Cylinder

Its very easy to mismeasure a cylinder lock whilst its in the door.

We strongly recommend taking it out to get an accurate measurement.

Be careful if you use a tape measure and not a ruler as the end of some tapes can make it tricky to get the right size.

Cylinders come in 5mm increments, do not reduce the size of your cylinder if your lock sticks out of the existing handle by less than 5mm.

PVC french doors sometimes have special central sections making it very difficult to remove and refit a cylinder lock.

Please call for advice.

Don't forget, our phone lines are open 6 days a week, so for advice on measuring, fitting or any aspect of door and window security please call one of our advisors.
